

# INGELELA LIKITH RAJ

SOC Analyst | SIEM | Splunk | Threat Detection | Security Operations  
Windows & Linux Security

✉ snkth123@gmail.com    LinkedIn    GitHub    Portfolio

## CAREER OBJECTIVE

SOC Analyst with hands-on experience in SIEM, Splunk, and security monitoring. Focused on threat detection, log analysis, and incident response. Built practical skills through real-world Splunk projects including brute force detection, account lockout monitoring, and Windows authentication dashboards. Eager to apply technical expertise in a SOC environment and launch a career in cybersecurity.

## EDUCATION

|                                         |                   |
|-----------------------------------------|-------------------|
| <b>Vel Tech University, Chennai</b>     | 2022–2026         |
| B.Tech Computer Science & Engineering   | (CGPA: 8.07/10)   |
| <b>Narayana Junior College, Nellore</b> | 2020–2022         |
| Class XII (MPC Stream)                  | (Percentage: 79%) |
| <b>Ratnam High School, Nellore</b>      | 2020              |
| Class X (SSC Board)                     | (Percentage: 96%) |

## TECHNICAL SKILLS

|                       |                                                                                                                                                                                                                                                                |

## CYBERSECURITY PROJECTS

**Agent Tesla Malware Investigation** 2026  
Conducted isolated virtual lab investigation of JavaScript-based credential stealer from Agent Tesla family using Windows 10 VM on VirtualBox. Performed static and dynamic analysis using VirusTotal, MalwareBazaar, and ANY.RUN sandbox. Identified SMTP exfiltration (port 587) to C2 domain mail.allportcargoservice.com (179.43.183.46) and mapped to MITRE ATT&CK techniques including T1059.007, T1082, and T1048.

**Brute Force Detection using Splunk SIEM** 2026  
Developed a comprehensive Splunk dashboard to detect and analyze multiple failed login attempts (Event ID 4625) across the enterprise network. The solution identifies brute force attack patterns by correlating failed authentication events from multiple hosts and user accounts. Configured automated email alerts using Gmail SMTP integration for real-time notification to security teams.

**Potential Account Lockout Detection using Splunk** 2026  
Built an advanced monitoring dashboard to identify user accounts approaching lockout conditions due to repeated failed authentication attempts (Event ID 4625). The system tracks failed login attempts per user account and generates early warning indicators when thresholds are reached. Implemented correlation searches to detect patterns across multiple authentication sources and identify potential password spraying attacks.

**Windows Authentication Monitoring Dashboard** 2026  
Created a comprehensive Splunk Dashboard Studio solution for monitoring Windows authentication events across the organization. The dashboard provides real-time visualization of successful (4624) and failed (4625) Windows logins, authentication trends, and suspicious login patterns. Implemented time-based correlation to identify unusual login activities such as after-hours access and multiple failed attempts followed by success.
